2. Allpro Insulator Network Sharing environment
3. Allpro Insulator set up to include a Satellite Database
4. Allpro Insulator working with a VPN
5. Allpro Insulator working with Allpro Web Sync

Stand-Alone Installation Configuration

In a stand-alone configuration of Allpro Insulator, both the Allpro Insulator program and its database reside on a single computer.

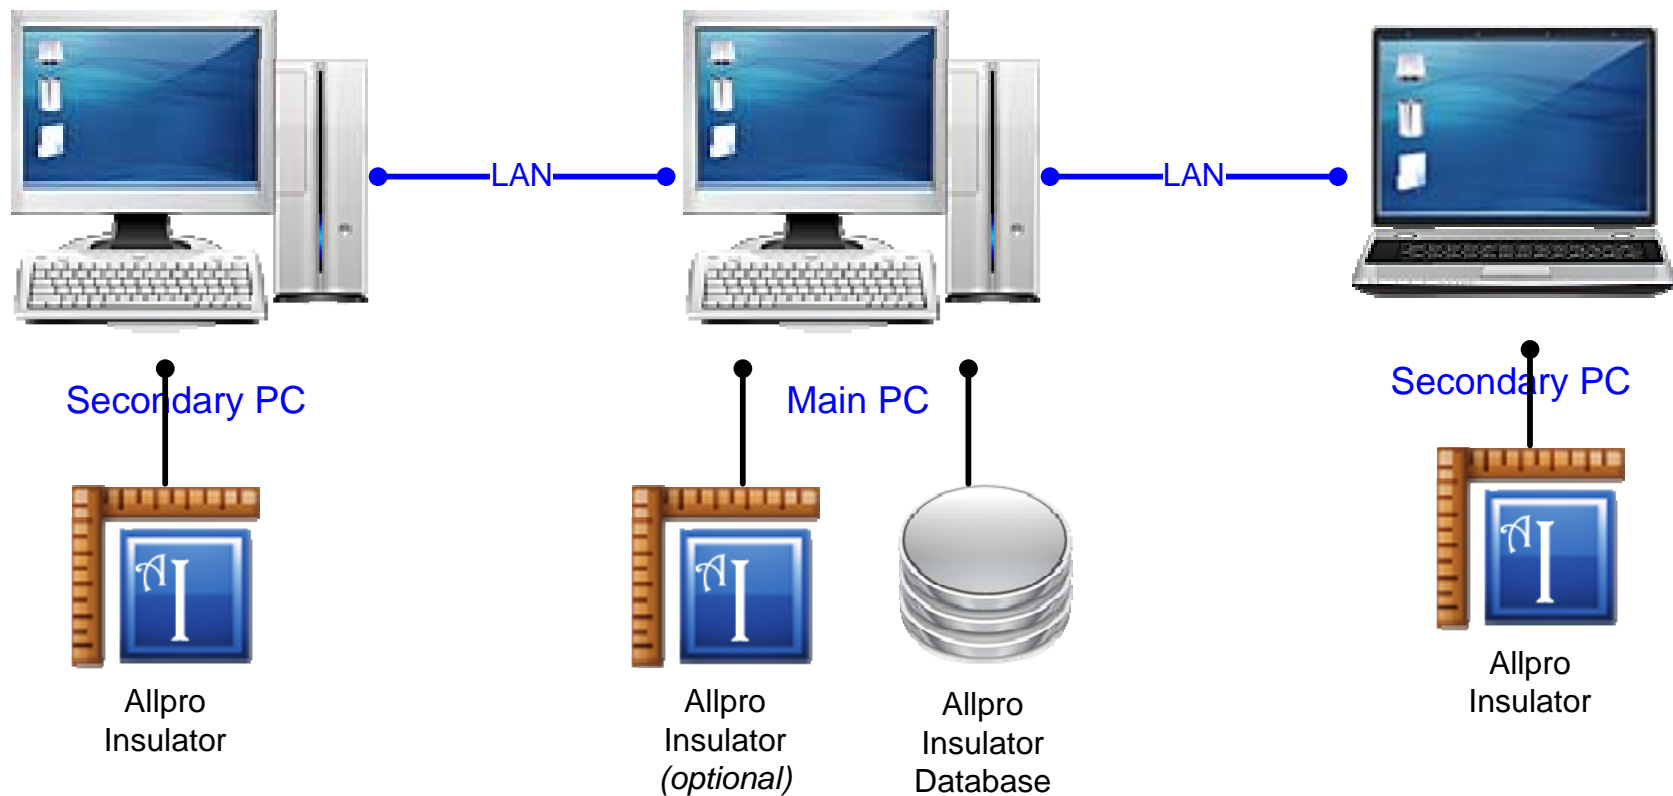

(Note that this is a Stand-Alone installation configuration and should not be confused with the Allpro Insulator Stand Alone Edition)

Network Sharing Installation Configuration

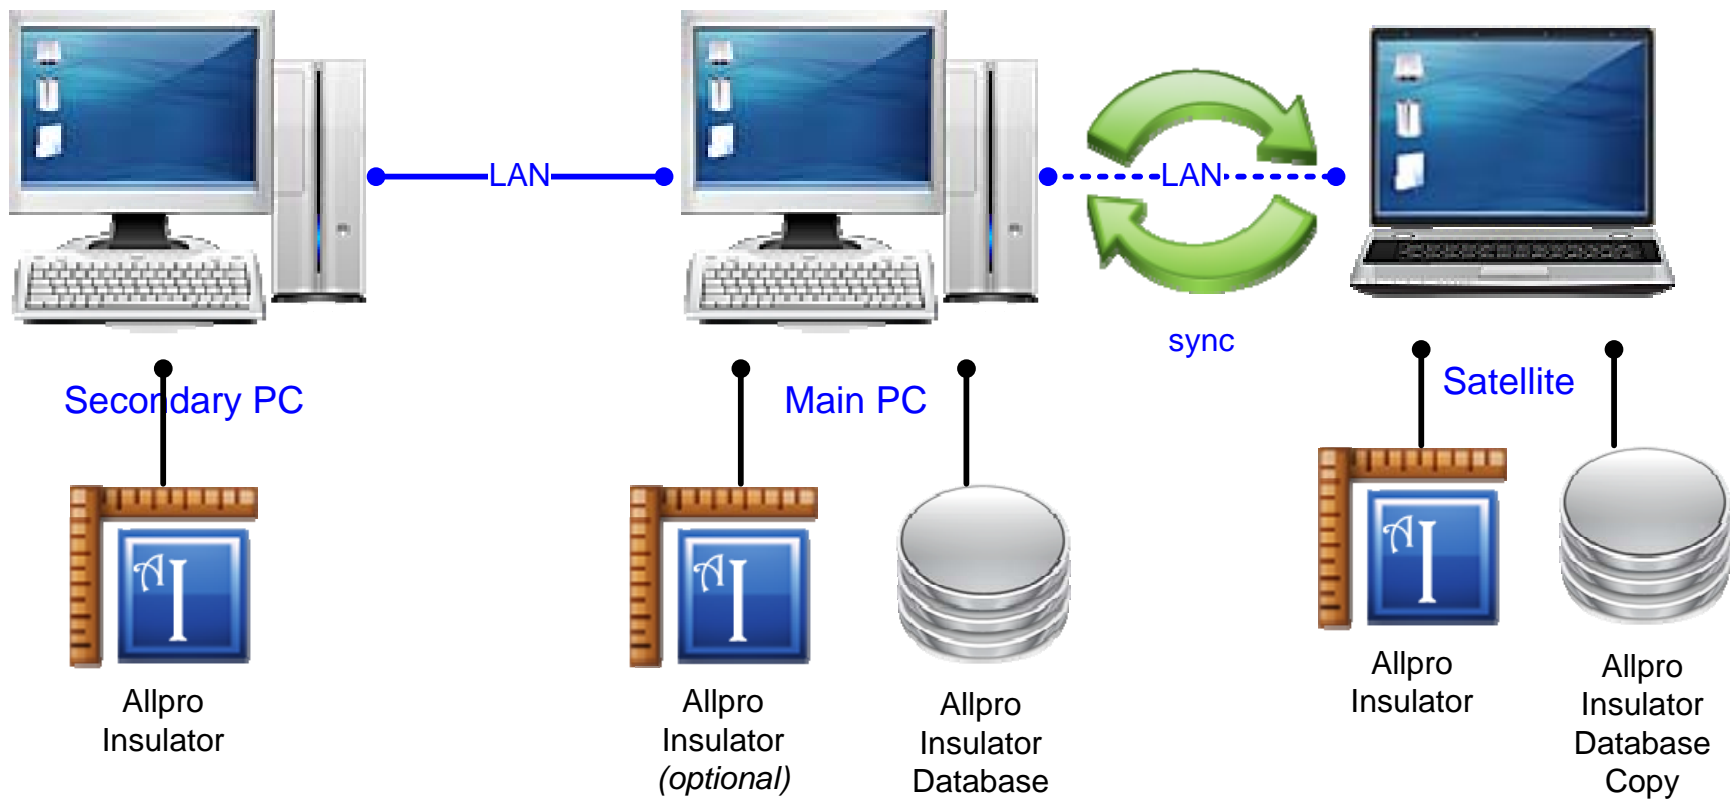

In a network sharing configuration of Allpro Insulator, the Allpro Insulator database resides on a single main computer which will share it with your other secondary computers. (You are not required to install Allpro Insulator on the main computer, unless you want to use the program on that computer.)

If you have any laptops as secondary computers, they will not be able to access Allpro Insulator when away from the office in this configuration.

Satellite Sync Installation Configuration

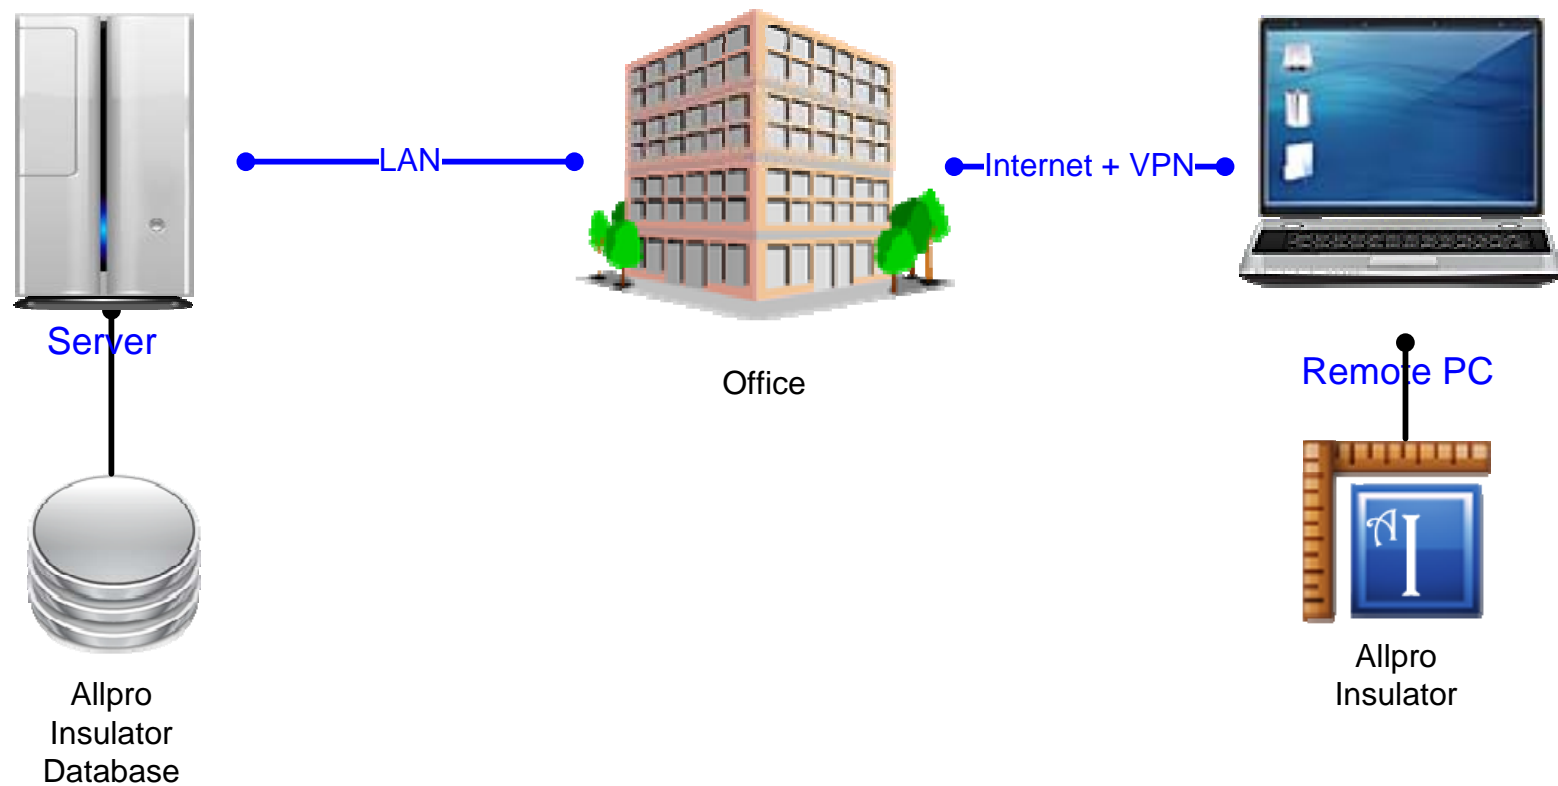

In a satellite configuration of Allpro Insulator, computers are set up exactly as in the Network Sharing configuration. The only difference is that laptops can contain their own copy of the Allpro Insulator database and synchronize with the main database when they return to the office.

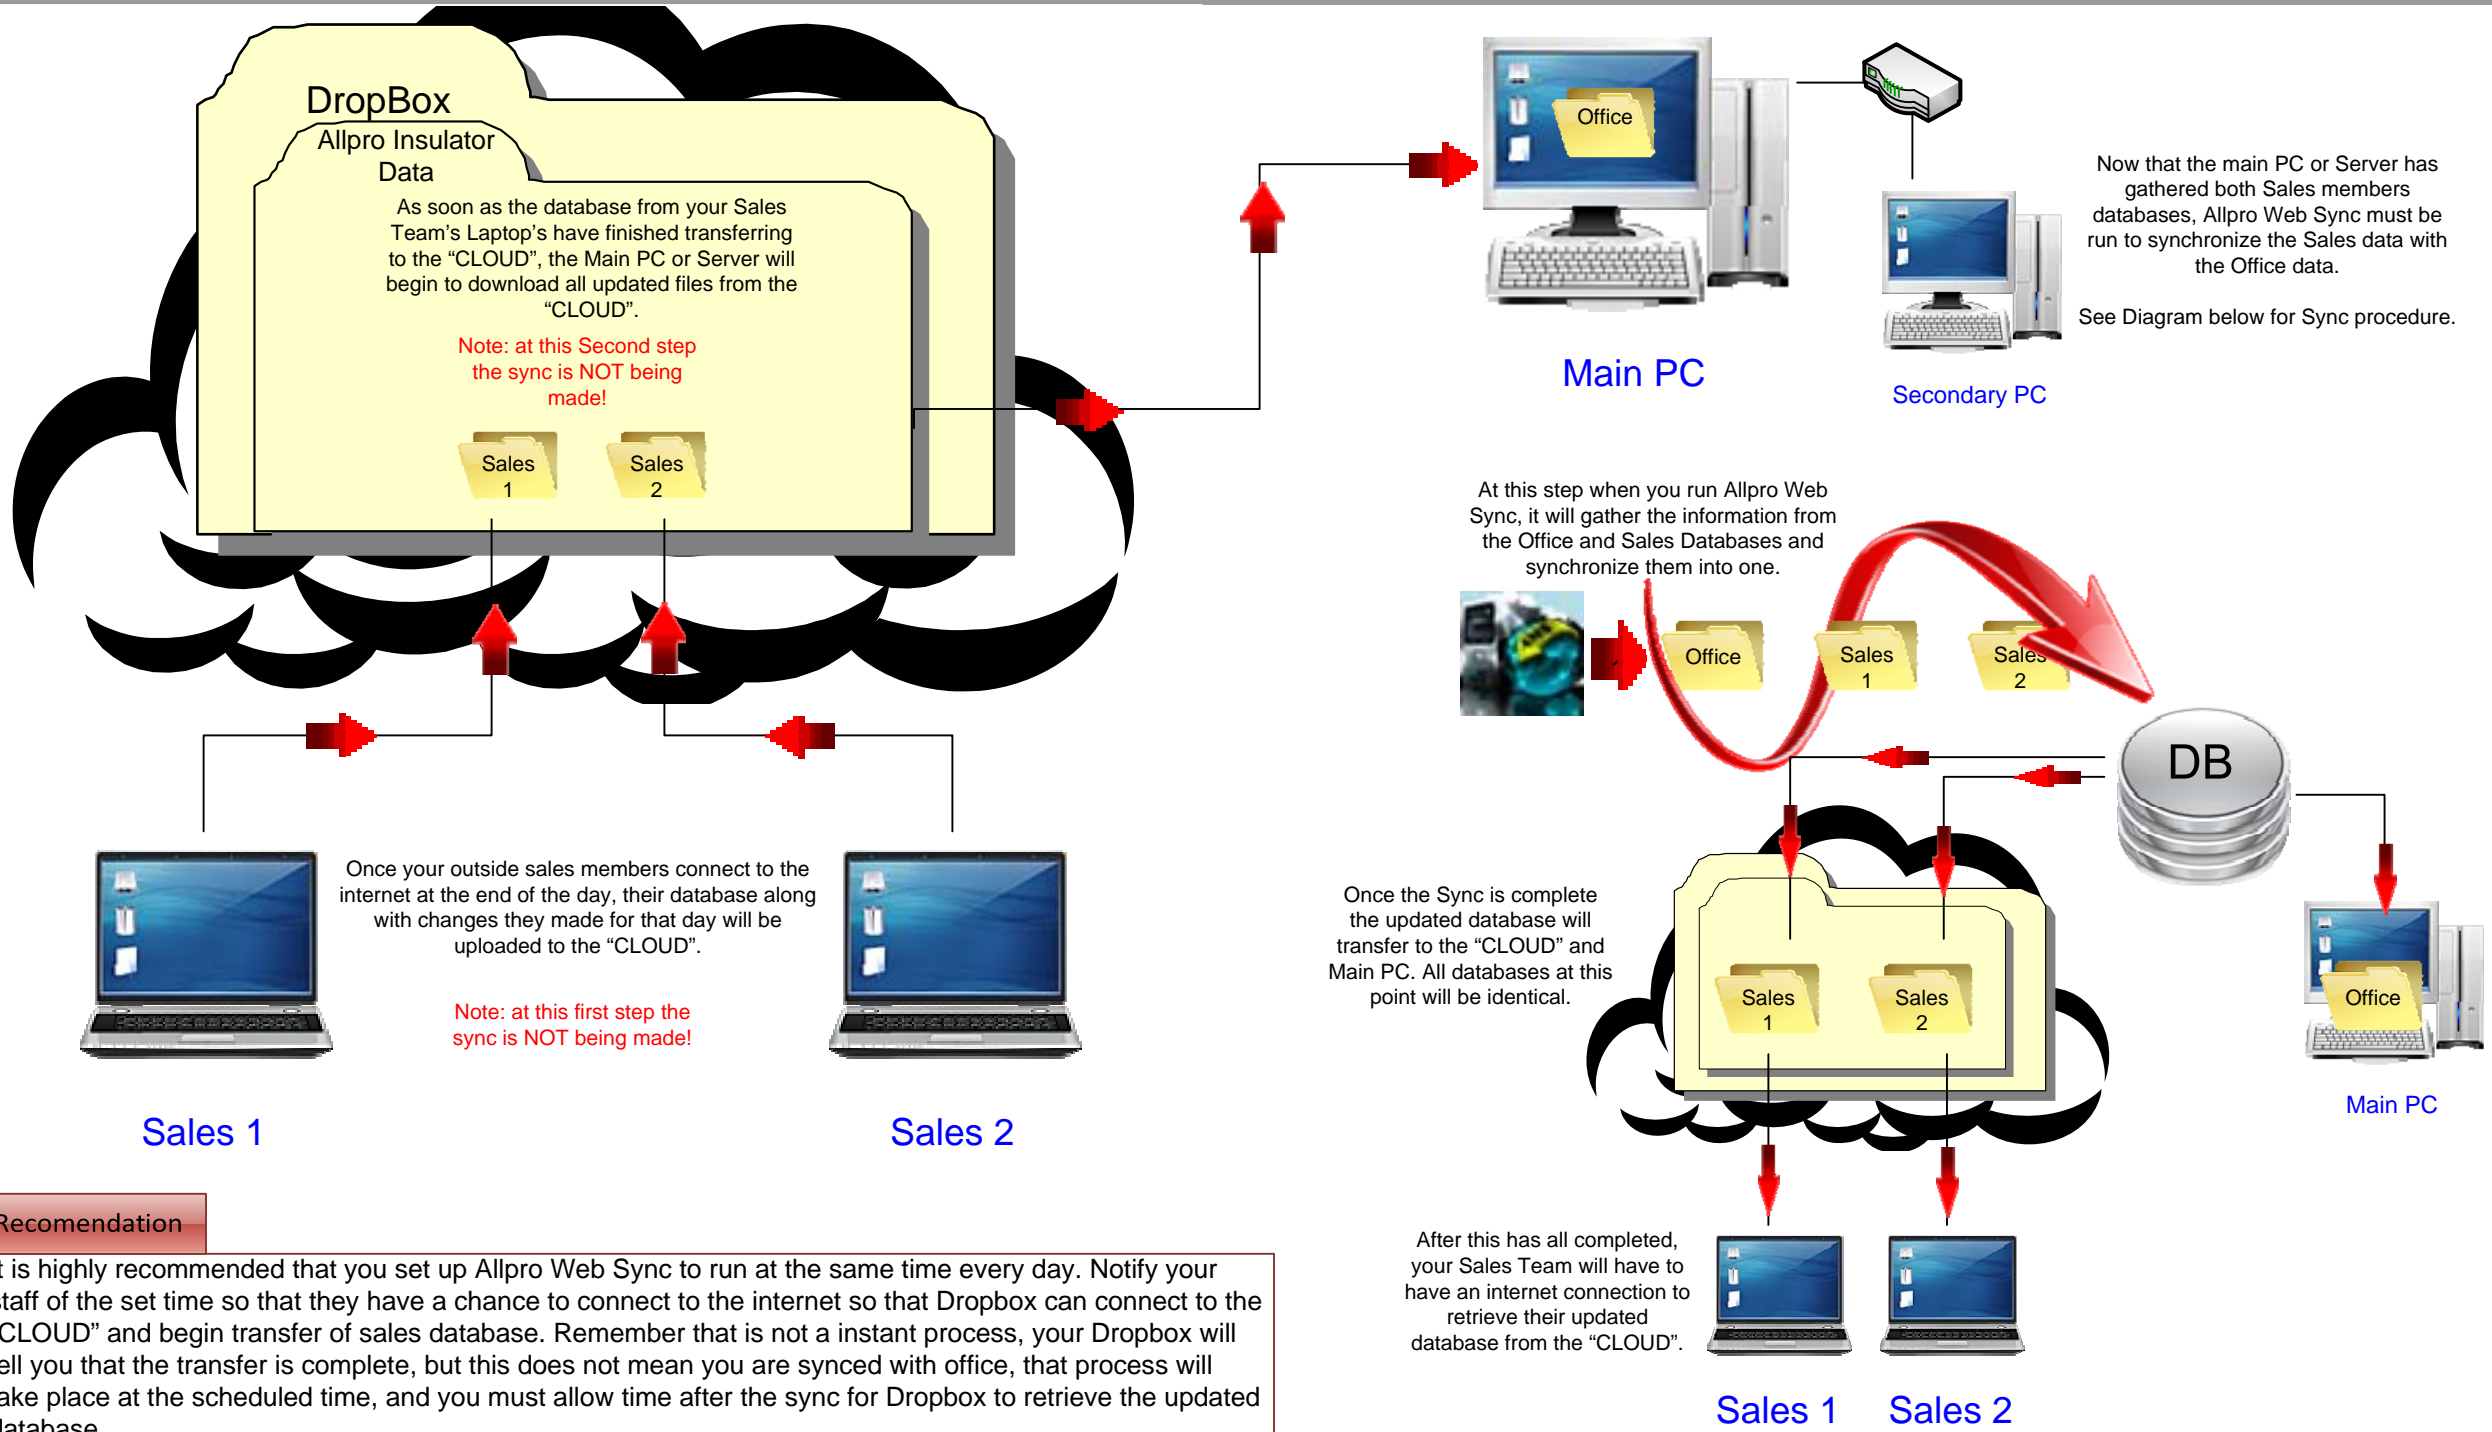

VPN Installation Configuration

In a VPN configuration of Allpro Insulator, computers outside of your office connect through a VPN service on a server in order to access the Allpro Insulator database.

Note that this is not a recommended method because users working outside of the office connecting through a VPN will experience a decrease in software performance.

Allpro Web Sync Installation Configuration

Recomendation

It is highly recommended that you set up Allpro Web Sync to run at the same time every day. Notify your staff of the set time so that they have a chance to connect to the internet so that Dropbox can connect to the "CLOUD" and begin transfer of sales database. Remember that is not a instant process, your Dropbox will tell you that the transfer is complete, but this does not mean you are synced with office, that process will take place at the scheduled time, and you must allow time after the sync for Dropbox to retrieve the updated database.
